

REX SG0300 Universal Grease LFB2000

威斯 SG0300 多用途油脂

Ref:#0-000-00-1-241-01

Description:

To Lubricate roller and plain bearings operating at speeds that permit grease lubrication. And it is perfectly applied on general plastic parts.

Service temperature range: -30 up to + 140°C

Consistency acc. DIN 51 818: NLGI grade 2

Poss. Denomination acc. DIN 51 502: KPF 2 K - 20

Benefits:

REX SG0300 is excellently resistant to oxidation and capable of carrying loads. It is very adhesive and resistant to hot and cold water. White solid lubricants prevent metal-to-metal contact in the area of mixed friction. Thus, friction and wear are reduced even at high surface pressure. The product's lubrication properties enable relubrication intervals to be prolonged. REX SG0300 does not contain any leaded compounds.

Application:

To reduce friction and wear on mechanisms exposed to very high loads, to prevent bearings from abrasive buildup, and to protect these against corrosion even in the presence of water.

REX SG0300 is the ideal lubricant to substitute conventional graphite or MoS₂ treated greases, especially where "dark" lubricants are unwanted.

To lubricate roller and plain bearings, guideways and other machine parts such as used in constructional machinery, machine-tools, paper mills, stoneware or textile industries, household appliances, washing machines, electrical or mechanical precision instruments, threaded spindles etc.
